

PUMPS FOR INKS UV OFFSET

the new system for the pumping of UV inks

After careful research of materials and new technologies , we have developed a pumping system for UV inks. Entirely designed and manufactured at our facility , meet all the demands and attention that the particular ink requires . The choice of components and their construction guarantee an optimal operation combined with a simplicity of use.

The system can be supplied in several variants:

- Single tapping : fully pneumatic operation to pump delivery system for cans up to 5 Kg .
- Modular with tapping : a single structure that includes four pumps and a practical tapping the table for dispensing ink from drums of 200 Kg to jars.
- Automatic: designed for bulk ink directly into the car , applicando the know -how of UV pumps to the established technology of our " ELCOLORA " plants at low pressure.

Currently the range includes two sizes of cylindrical drums for pumps from 200Kg , able to cover the power required from printing machines or racking for ink manufacturers .
